

Olkiluoto 3, Finland

Reliable high-safety solutions

Olkiluoto 3, Finland

Facts and Figures

As a specialist and expert company for safety-related equipment, the order volume was steadily expanded over the course of the project. The complex requirements for doors, ventilation grilles and special constructions were carried out by SOMMER from planning, calculation, manufacture and delivery to assembly.

The manifold requirements such as fire protection, pressure wave, airplane crash, radioactive radiation, earthquake and terror protection formed the basis for the constructive implementation. Depending on the requirements, additional properties such as air tightness, water tightness and protection against electromagnetic waves were combined in products.
